

# Getting Started

## How to start securing your network.

To start scanning and secure your network from vulnerabilities with Mageni Security Platform, you just have to completed these two simple steps.

## 1. Quick Start

---

Install the latest version of Mageni Security Platform.

For Ubuntu 18.04 Desktop and Server Edition run:

```
curl https://dl.mageni.net/ubuntu/installer > installer && chmod 755  
installer && sudo ./installer
```

## Registration required

You will need a registration token. Go to [register](#) to get one.

The installer will install and configure Mageni Security Platform automatically. After the installer finishes, the platform will be ready to start scanning.
